Introduction to Soft Skills Framework

The Youthreach Soft Skills framework is the culmination of many years of work by practitioners working directly in, or providing support services to, centres for education and training delivering the Youthreach programme to early school leavers. The rationale for the project is to direct attention to the personal and social skills that form a core part of the programme and a major part of the work of centres. The goals of the project are fourfold: a) to identify the soft skills involved in personal and social development, b) to consider how they can be taught systematically in centres, c) to find a way of measuring the progress made by individuals in relation to these skill areas and d) to devise a method for recording progress. Since early 2010 representatives of the six Youthreach centres in Co Meath, Vivienne Branigan, Vanessa Connell, Aaron Fowler, Eileen Gargan, Fiona Graham, Alan Larkin, Liz Lavery, Enda McDonnell and David O'Connor, have worked closely with Mary Gordon, Senior Psychologist in the Department of Education and Skills, to develop the framework and bring it to a stage where it can be piloted in the centres. This project is being trialled with the support of the National Educational Psychological Service and Co Meath Vocational Education Committee.
The Context for Addressing Soft Skills

Well-Being

A person’s well-being relates to their physical, social and mental state. It requires that basic needs are met, that people have a sense of purpose, that they feel able to achieve important goals, to participate in society and to live the lives they value and have reason to value. People’s well-being is enhanced by conditions that include financial and personal security, meaningful and rewarding work, supportive personal relationships, strong and inclusive communities, good health, a healthy and attractive environment, and values of democracy and social justice. (NESC, 2009, p. 138)

In 2009 the National Economic and Social Council published a report entitled Well-being Matters: A social report for Ireland. The rationale given for focusing on people’s well-being was that people are central to economic and social progress, that social progress cannot be measured by GDP alone and that well-being is something that people care about. For these reasons NESC proposed that there was a need to monitor the impact of policy decisions and actions on people’s well-being. The concept of well-being used in the report is based on the concept of ‘human flourishing’, incorporating the ideas of having a sense of purpose in life, participating in civic life, having friends, loving and being loved.

Soft Skills and Well-Being

Focusing on soft skills in Youthreach is about placing well-being at the centre of the work of centres. The competencies and skills involved are broader than the academic ones that are formally taught in centres and schools and assessed by standardised tests or through national accreditation systems like FETAC and the state exams. The terms ‘core’, ‘central’, ‘key’, ‘life’ and ‘transferable’ skills are sometime used instead of ‘soft’ skills to refer to skills that are hard to measure but important for personal well-being, success and efficacy in a wide range of situations. The terms ‘basic’, ‘foundation’ and ‘generic’ tend to be used for skills such as literacy, numeracy, IT and aspects of communication that are taught more formally within the educational system.

The purpose of the Youthreach Soft Skills project is the following:

1. To identify the range of soft skills that are relevant to the work of centres and to locate these on a framework
2. To identify suitable pedagogical approaches and resources for teaching soft skills
3. To identify appropriate ways to measure and report on learners’ progress in the development of soft skills

Overview of the concept of Soft Skills

What are soft skills?
Areas of learning designated as ‘soft skills’, ‘key skills’ and ‘key competences’ are found in a wide range of systems. There is a continuum from the ‘hard’ to the ‘soft’ end of soft skills – some areas are more content- or knowledge-focused than others, while others are approaching personal qualities and dispositions. Underlying ‘generic’ skills have been identified as being in the areas of communication, mathematics, IT, working with others and learning to learn. There is considerable variety in the range and place of different attitudinal and personal dispositions and qualities: e.g. individualistic versus collective; demonstrating initiative or compliance. Soft and key skills / competences have been defined in a number of projects of the last twenty years by Departments of Education and/or Departments of Labour, involving both general and vocational systems and occasionally adult education and also by employer stakeholder bodies, sometimes with input from trade unions. This work has been influenced by research in cognitive psychology and theories of learning. The soft skills identified from the general and adult education system are more orientated towards the development of the whole person, community and citizen. The vocational education system tends to be more geared towards labour-market readiness. Soft skills are not so much identified, as constructed, in response to the prevailing interests, needs and the influence of the different stakeholders. This gives a central position to the question of the purpose and values underpinning the identification of these skills.

The rationale for identifying and teaching soft skills
There are a range of rationales for focusing on soft skills development. These include empowerment of the learner and preparation of the worker for the labour market. Other foci include supporting the learner in becoming an effective citizen, an effective parent/family member, to live respectfully in a culturally diverse society and to promote environmental awareness. The underlying purpose affects the aim and also impacts on teaching methods, power dynamics between teacher and learner, the areas chosen for assessment and how assessment is done.

---

1 This section is based on a presentation given by Dr Liz McSkeane to a seminar in the Ashling Hotel, Dublin in April 2009
Assessing soft skills

Communication, Maths and IT are generally assessed through regular assessment processes and so are not under consideration here. The most common soft skills areas to feature are problem-solving, learning to learn and working with others. Areas close to designating personal dispositions or qualities are not widely assessed formally within the system but this does not necessarily mean that they are not assessed at all. Educators do assess these areas but they and the assessment processes they use may not be valued or foregrounded. Some stakeholders, e.g. employers in some countries, are very interested in the formal assessment of these areas (and certification, by the education system), for the purpose of facilitating recruitment. Certain areas are commonly considered to be difficult or impossible to assess, with some teachers and tutors thinking that soft skills do not need to be explicitly taught as they are ‘caught’.

Soft skills and the curriculum
There is an increasing recognition of the importance of context in the teaching of soft skills. This involves contextualising the skills in a meaningful situation and integrating them into other skills and activities. Although this embeds the skills in a wider arena it can make assessment of them more difficult. The absence of a set of signposts by which to assess soft skills has been a major obstacle for practitioners and for programmes. Equally the lack of opportunity for learners to demonstrate their achievement in the different areas of soft skills can be a problem for them. This raises the question of whether the opportunities to learn and develop these skills are available to learners if the opportunities to demonstrate or assess these dimensions do not exist. The fundamental issue may lie in the actual development or teaching of these areas, rather than only in their assessment.

Methodologies
In order to teach soft skills in deliberate ways teachers need to be clear about the specific skills they are encouraging and developing in their learners at any particular time. The methodologies they use may be formal or informal. Identifying specific skills to teach and thinking about how they will teach them also allows teachers to recognise when the skills are demonstrated by their learners and this facilitates their assessment and makes it more natural.
Terminology – Soft Outcomes, Indicators and Distance Travelled

What are ‘Soft Outcomes’?
In the context of ESF Objective 3 projects and other employment programmes dealing with people disadvantaged in the labour market, soft outcomes are defined as those which, unlike hard outcomes cannot be measured directly or tangibly. They are:
- intangible, not concrete
- subjective
- a matter of degree rather than absolute
- personal, depending on individual client needs
- intermediate (usually measuring progress towards hard outcomes such as employment and qualifications)

What are ‘Soft Indicators’?
There is an interplay between indicators and outcomes in that indicators are the means by which it is possible to measure whether outcomes have been achieved. The term soft indicators is used when referring to the achievements which may 'indicate' acquisition or progress toward an outcome. It is clear that not all indicators, or measures of progression, are necessarily suitable for all client groups; some are target group specific. Examples of soft indicators are:
- information and practical knowledge
- coping mechanisms (such as anger management and solution-focused thinking)
- social behaviours appropriate to different situations
- confidence
- less fearfulness about the unfamiliar or unknown
- self-protection skills
- assertiveness and self-reliance
- habits of forward planning, reliability and responsibility.

What is ‘Distance Travelled’?
Put quite simply, the term distance travelled refers to the progress that a participant makes in personal development or the acquisition of skills as a result of a project intervention or programme. While the acquisition of certain soft outcomes may seem insignificant for certain individuals, the leap forward in achieving these outcomes can be immense for others.
Review of projects concerned with the identification of non-formal / non-academic competencies and soft skills

Interest in the area of soft, or allied, skills has mushroomed in recent years. Work is being done in the international policy context (e.g. OECD and European Commission), in employment and social inclusion programmes, in adult literacy, in education more generally (e.g. FETAC, NCCA), in educational guidance and in the Youthreach programme. What follows is a brief outline of these developments.

International Projects
The work to identify key competencies has been driven by both economic and market considerations and by social cohesion and justice considerations. The OECD Programme for the Definition and Selection of Competencies (DeSeCo) was initiated to go beyond performance in school subjects and to develop an explicit, overarching conceptual framework for the wider range of skills, knowledge and competencies that affect a person’s success in life. The framework classified competencies in three broad categories: using tools interactively, interacting in heterogenous groups and acting autonomously. In 2006 the EU adopted the European Framework of Key Competences, which identified nine key competences in the areas of communication in the mother tongue. These are communication in a foreign language; mathematical literacy and basic science and technology; digital competence; learning-to-learn; interpersonal and civic competences; entrepreneurship; and cultural expression. While most of these are not, strictly speaking, soft skills, learning-to-learn has a number of soft elements. This competence has been the subject of a separate pilot study by the EC Centre for Research on Lifelong Learning (CRELL), which has identified a combination of skills, knowledge, attitudes and values underpinning it. Three dimensions are considered to be involved in learning-to-learn: a cognitive one (e.g. using rules and mental tools); an affective one (e.g. motivation, academic self-esteem) and a metacognitive one (e.g. problem-solving, accuracy). See Appendix B for further information about these international projects.

Employment and Social Inclusion Programmes
Employment and social inclusion programmes in many countries have become increasingly interested in soft indicators in recognition that they are often as necessary for employability as the harder indicators of qualifications. It is acknowledged that soft outcomes are less tangible, however, and more subjective, often involving a matter of degree rather than an absolute measure. Development of systems to measure soft outcomes and distance travelled are now considered good practice in programmes as they record progress being made by learners. Among the changes measured are attitudes (e.g. in relation to motivation, confidence), personal attributes (e.g. in timekeeping, appearance) and practical learning (e.g. form-filling, money management). The skills are measured by a combination of self-reports on attitudes and experiences,
trainer reviews of learners, portfolio evidence and record of progress in individuals’ plans. There is no uniformity across these employment and social inclusion programmes and it is accepted that no one model fits all.

The advice generally given for projects and programmes is to think about what the appropriate ‘soft outcomes’ are for the project and to identify indicators for these. The reasons for gathering the information should determine what data are collected e.g. whether to provide evidence to funders about the achievement of the project aims, to provide feedback to the learners and to tailor provision to their needs, to support the overall project evaluation and lessons for the future, or to provide evidence for learners to use on their CVs or to access training, education or job opportunities. For more information of the measurement of progress in employment and social inclusion programmes see the UK Department for Work and Pensions website (http://www.dwp.gov.uk/).

Psychology
The psychology literature has long had an interest in the development of competencies throughout the life cycle. Ecobiological theories, such as the work of Urie Bronfenbrenner, emphasise the contextual nature of normal development, while psychodynamic theories focus on the nature of early experience and its influence on the psychosocial resources that are available to the person in meeting their life's challenges. For an example of a staged model of psychosocial development see Eric Erikson’s model see Appendix C. Within the educational psychology literature distinctions are drawn between learning behaviours (e.g. attentiveness, organisation, communication), conduct behaviours (e.g. respect towards staff and peers) and emotional behaviours (e.g. happiness, social awareness, confidence, empathy). The NEPS Continuum of Support, for example, focuses attention on social competence and emotional well-being as well as academic success.

Education
Attempts to capture learning beyond the more easily measured competencies that are taught formally in educational settings are increasingly being developed. The NCCA has identified the key skill categories of information processing, critical and creative thinking, communicating, working with others and being personally effective and sub-divided each into a number of constituent elements. As well as developing modules in areas such as Personal Effectiveness, FETAC include the categories of People Skills and Conceptual Skills in their measures and distinguish between breadth and kind of knowledge, range and selectivity of skill, and context, role, learning to learn and insight in relation to competence. See Appendix D for further information about FETAC and NCCA skill categories.
There is increasing attention paid to mental health and well-being promotion in schools under the Department’s guidance, SPHE and special education policies, with a wide range of programmes explicitly designed to teach skills in the non-academic areas (see, for example, the SNIP resources in Appendix E). Early childhood education, at preschool and primary levels, prioritise a range of personal and social development areas which are not linked to formal learning but are viewed as necessary precursors for future academic success, such as perceptual and motor processing abilities, language competencies and social awareness. In adult literacy, the research has emphasised learning outcomes such as confidence and not just on the achievement of national curriculum standards or awards (e.g. NIACE, NALA).

In Youthreach the SEN Initiative has piloted a range of ways of measuring distance travelled in relation to the acquisition of soft skills, including the use of Quality Framework processes, feedback from the Department Inspectorate following whole centre evaluation, staff meetings on student development and progress, formal student evaluations, progress made in relation to learners’ IAPs and achievement of short/medium/long term goals identified by key workers, focused observations by staff on group-wide changes, feedback from parents, monthly group case supervision meetings, feedback from staff in outside agencies and learners’ own assessments of the progress they have made using the Wheel. In addition, an annual reporting template is filled in by the centre coordinator which records the number of learners who have made significant progress in a range of hard and soft indicators (see Appendix F).
Youthreach Soft Skills Framework

The framework consists of a matrix of three competencies and three skills. The notion of competence or competency is a broad one, incorporating dimensions such as knowledge, experience, cognitive skills, practical skills, attitudes, emotions, values, ethics, and motivation. Competence refers to a general capacity. It helps the person meet complex demands in their life through the mobilisation of the psychosocial and other resources embedded in them which function in interaction with real world tasks. The benefit of a concept like ‘competence’ is that it directs attention beneath the observable behavioural surface of ‘skills’ to inquire into the mental capacity that creates the behaviour and into the processes by which knowledge is created. Skill is being defined as the ability, usually learned or acquired through training, to perform actions which achieve a desired outcome. Skill includes the notion of being able to perform these motor or cognitive acts with ease and precision and with the adaptability to changing conditions.

Life Skills

Responsibility

Social Skills

Power

Context

Context
The Competencies

1. Confidence

The goal is to increase the learner’s sense of confidence. The focus of this competence is on emotional awareness and intelligence. The learner becomes more self-aware. They can understand, accept and name their emotions. They know themselves and have a sense of identity. They also accept themselves and value who they are.

2. Responsibility

The goal is to increase the learner’s sense of responsibility. The focus here is on social awareness and intelligence. The learner is sensitive towards others and can understand where they are coming from. They can also accept and show consideration for others. They are willing to take responsibility for others and for themselves in relation to others.

3. Power

The goal is to increase the learner’s sense of power. The focus is on rational awareness and intelligence. The learner has a knowledge of the wider world outside of themselves and of the way it works. They understand how to be effective in the world and show some independence and autonomy. They also have an appreciation of what the world can offer them. They have a capacity to think about and evaluate situations in a way that is not egotistical. They can plan and take action.

The Skills

1. Self-regulation skills

Self-regulation skills require a level of self-acceptance as well as self-awareness as this leads to the capacity for self-control that is at the root of self-regulation.

2. Social skills

Social skills are based on awareness of others. Empathy and a sense of social connectedness allow the learner to share the experience of others and to engage in joint action with them. The effective management of interpersonal relationships is based on a combination of social awareness and self-regulation.
3. Life skills

Life skills are practical skills that flow from an understanding of how things are done in the world. They overlap with social skills but operate in a broader arena and involve more formal interactions with others. They include curiosity and engagement with the world.

Teaching Soft Skills

---

Focus: The Self
Goal: To develop the learner’s confidence
Competencies: Emotional competence; sense of identity; sense of purpose
Skills: Life Skills
Grid: 1a

The life skills associated with the development of self-confidence are those which provide the learner with the ability to look after themselves in practical ways and to cope with the practical challenges of their everyday lives e.g. the way they present themselves, their ability to carry out the tasks assigned to them, their care for their physical and sexual health. The learners can make decisions and plans to benefit themselves and to advance their life goals. They are aware of and value their own achievements.

Staff are careful to pitch work at the right level for each learner – it should be neither too difficult nor too easy. Many vocational courses teach life skills e.g. hair and beauty, cooking and catering, IT. Centres can also address life skills areas through SPHE e.g. personal safety, substance use, healthy eating, personal hygiene. Certain life skills can be taught explicitly by helping learners apply for courses or grants, supporting them to do the driver theory test or to open a bank account. Skills such as goal-setting are promoted through key-working and mentoring. Body confidence is promoted through sporting and fitness activities.

Other skills are acquired through experiential learning e.g. from visits to a restaurant or hotel or from trips abroad. Staff can use the incidental happenings in the centre as an opportunity for learning and this is rendered even more effective if it is followed up with discussion and analysis. Problems and situations that do not work are often an extremely rich source of learning when staff use them to good effect by deconstructing what went wrong. Learners can also learn from each other and may benefit from formal or informal kinds of peer mentoring from more experienced learners.

Organising events in the centre is one way of creating situations within which learners can learn life skills and how to collaborate and negotiate with others. Having experiences of success in these kinds of situations builds confidence and practical skill. Centres should avoid putting learners into situations they are not ready for and where they are likely to experience failure or conflict. They should be prepared in advance or guided during new experiences so that they are as positive for them as possible. This may involve waiting until a learner is ready before introducing an intervention e.g. work experience, public performance or learning task. Staff are encouraged to use challenge and analysis in creating learning opportunities, creating situations on purpose if they do not come up naturally. Methodologies can be playful and make use of the unexpected. Modelling by staff is an important pedagogical strategy.
Focus: The Self
Goal: To develop the learner’s confidence
Competencies: Emotional competence; sense of identity; sense of purpose
Skills: Self-regulation Skills
Grid: 1b

The key skills associated with this area of the grid relate to self-awareness and self-acceptance. The learner can recognise their emotions and acknowledge their needs. They know themselves well enough to recognise their personal triggers and this gives them some choice about how they react to situations and helps them cope with adverse circumstances. Self-regulation also increases confidence by increasing the learner’s personal effectiveness with others and in the world. These self-regulation skills include being able to keep their word, being punctual and reliable, exercising self-control over drink and drugs and managing anxiety in new situations.

FETAC modules at levels 3 and 4 in Personal Effectiveness and the Junior Cert SPHE curriculum provide a curricular approach to the development of self-regulation skills for promoting emotional awareness and acceptance, leading to greater self-confidence. Sports, and especially team games, create a good context for learning in this area because they involve discipline and the need to respond to a challenge.

Role plays and working in pairs or small groups provide a method for exploring how the learners react to and experience various situations, including barriers to their learning or development. They facilitate conversations about change and where help might be found. They provide a mechanism for learners to receive feedback from others in a safe manner and in this way to develop a better understanding of themselves.

Teachers can also give time to exploring learners’ identities – e.g. All about Me projects. They can direct questions which aid self-reflection e.g. asking learners to say something about how they were in the past and how they are now; affirming a learner’s personality and characteristics; naming feelings in a way that shows acceptance of them.

Teachers can encourage self-expression and self-advocacy by inviting learners to speak about their motivations and to describe their experiences without responding in a censorious or critical manner. Teachers need to use facilitation skills for much of this kind of work and to match learners carefully when they have them working in pairs or small groups. The approach should to be encouraging and respectful and teachers will need to model themselves how they want the learners to behave.

Another methodology is debriefing after an event (especially one involving conflict or some other difficulty). The learner is encouraged to think about what happened, what assumptions they were making and how they read the situation. Their feelings are accepted but their interpretations and actions can be explored and alternative possibilities identified for the future.
Focus: Others
Goal: To develop the learner’s sense of social responsibility
Competencies: Social sensitivity; sense of connectedness; capacity for empathy
Skills: Self-regulation Skills
Grid: 2a

There is a close link between social competence and emotional well-being. Increasing learners’ social skills is of benefit to the learners themselves as well as to others. They learn how to express emotions in a way that makes them more acceptable and increases their connectedness. They become skilful in their relationships e.g. can give and receive apologies and avoid conflict. If they are in trouble they are able to ask for help. However, the development of social skills is also to increase learners’ sense of responsibility towards others, with the main focus being on the wellbeing of other people. The learner will take care to manage emotions that could cause problems for others, e.g. feelings of anger, jealousy or exuberance. They can restrain impulsivity and they take responsibility for the consequences of their actions.

The self-regulation skills associated with responsibility show an understanding of where others are coming from and take account of this. They are premised on social awareness and skill. The learner can manage and resolve conflicts and observe rules, e.g. the rules of the road, which consider the needs and interests of other people. Conflict avoidance and peace restoration skills are present. The learner can take a broader view by listening to others and appreciating that it is their point of view even if they don’t share it.

Learners are encouraged in a range of ways to consider how things might affect other people. Reflection after the event is useful and this can be done through key working or mentoring. However group sessions provide an immediate arena for attending to the feelings of peers and are thus a rich context for the development of self-awareness in relation to one’s impact on others. Group process work and the kinds of methodologies used in SPHE also encourage this kind of learning.

Centres can also encourage learners to do things for others in specific ways, e.g. holding a coffee morning for elderly members of the community, supporting a tidy towns project. These kinds of activities require team work and team work requires self-regulation. Communication skills can be practiced both formally and informally with the skill of listening being a particularly important self-regulation skill.
Focus: Others
Goal: To develop the learner’s sense of social responsibility
Competencies: Social sensitivity; sense of connectedness; capacity for empathy
Skills: Social Skills
Grid: 2b

The social skills required when the focus is on others involve empathy and understanding. They include observational skills such as the understanding of body language and facial expression and the ability to notice the feelings and needs of others. Learners show a willingness to take care of others and to be generous. They know how to be assertive without being aggressive and can communicate effectively in social situations. Learners who are socially skilled may use charm or jokes and make good listeners.

Centres that promote social awareness and understanding place the building of relationships at the core of what they do, and they do so in an overt way by actively promoting quality social interactions among the learners but also between learners and staff members and among the staff team.

Methodologies that encourage social awareness and empathy include the use of restorative justice approaches that take account of victim impact and social justice. Consultation with others through, for example, interviews and surveys, is a way of encouraging learners to listen to the experience of others. Activities such as community clean ups, fund raising and other charitable work give learners the experience of being generous and acting in a practical way on behalf of others.

Other methodologies that facilitate the development of social skills include role plays, joint experiences and art projects (e.g. film, music, drama, photography, etc.) that evoke strong emotions and create a context for learners to notice the feelings of others. Staff model social connectedness and demonstrate enjoyable ways of interacting.

FETAC Personal Effectiveness and the SPHE curriculum provide the main formal mechanism for addressing this area of learning. Teaching methodologies that involve learners working in a pair or small group provide opportunities for the development of social skills and increase confidence. Learners learn how to collaborate with others and how to manage differences of opinion or interest. They learn to think before speaking and to consider the consequences for others and for themselves of their actions.
Focus: The World
Goal: To develop the learner’s power
Competencies: Relational awareness; ability to decentre the self; curiosity
Skills: Social Skills
Grid: 3a

If a young person is to have power they must be able to work cooperatively with others. This means having the skills to deal effectively with people in a range of formal, semi-formal and informal situations. The learner takes account of context and is able to behave appropriately in different contexts. They are aware of the protocols of politeness that are expected in various social situations. For example, they know the difference between socialising with friends, engaging in sport, studying in the classroom and going out on work experience. They show awareness of and respect for the situation they are in.

Informal experience is the principal way in which these kinds of skills are learned. Confidence is built up by the successful negotiation of new social situations. Centres set up opportunities for this kind of learning and follow them up with opportunities for debriefing and discussion. Work experience is a key example of this as it involves the practising of social skills in a real life context, social skills that relate to efficacy in the world. Work experience is most successful when it involves careful preparation, mediation and reflection.

Explicit teaching of social niceties can be very helpful to a young person who has not had the opportunity to learn these in the normal course of life. It can remove some of the tension associated with entering new situations. These niceties are not quite the same thing as consideration for others and are better presented as a social code than as a set of moral principles. Awareness of others – their needs as well as their expectations – however is a central part of this learning.

The development of personal power is a sensitive business as it grows with experiences of personal effectiveness and success in real world situations. It also grows through the development of a kind of emotional confidence which comes from being treated with respect by others. Staff make an emotional investment in learners by treating them in this way and ask for an emotional investment back from them.
Focus: The World
Goal: To develop the learner’s power
Competencies: Relational awareness; ability to decentre the self; curiosity
Skills: Life Skills
Grid: 3b

The life skills associated with being powerful in the world are largely about knowledge and competence and involve the use of rationality. The learners can locate themselves within the wider world and understand its structures, practices and rules. They can think about and evaluate social and political matters or events and can weigh up risks and decide how to act accordingly. Thus they have the capacity to solve a range of practical problems.

They can also access information and use it and employ learning strategies efficiently. It is good for learners have a basic knowledge of geography and history as well as the key skills of oral communication, literacy, numeracy and IT. Cultural knowledge is also important in relation to sport, music, films and television as this locates them in the social world and gives them a basis for connection with others.

Also important is the adopting of a practical approach to problems and issues that need to be dealt with. The learner is supported to think about their situation and to set practical goals for themselves. This involves thinking about the future, prioritising and goal-setting. It will also frequently involve linking in with external agencies, services and supports.

The principal non-formal way in which learners will acquire life skills is by mimicking staff. It is crucial that staff model friendly social interaction e.g. use people’s names, bid them ‘good morning’, etc. Eating together is a particularly important life skill and one that may need to be modelled and practiced for some learners before they become comfortable with it.
Rating, Planning and Measuring Progress

The framework provides a structure against which a learner’s soft skills can be evaluated and progress in relation to them described and measured. The process is as follows:

The staff team discuss each learner in turn using either template A or B (see Appendix G). They rate the learner under each of the three competencies – either by giving one general rating (template A) or by allocating a rating separately to the two skill areas encompassed within a competency (template B).

The rating is out of 10, with 1 representing the lowest level found among learners on entry to the programme and 10 representing the highest level achieved by learners at the end of their time in a centre. This range is not an absolute measure but reflects the scale typically found across a group of Youthreach participants. So while applying a rating is not an objective science it is not totally subjective either because it is based on the considered views of experienced staff who have had practice at observing learners in a number of different contexts over time. The evaluations are made on the basis of this experience. With time the staff will become more sensitive to the levels of skill being demonstrated by learners and more confident about making comparisons. The comparisons take into account the different levels of skills demonstrated by learners (past as well as present), with the young person being rated according to the norm for Youthreach learners. The rating is also being made within the learner, with the young person being compared against themselves over time.

Before the rating is decided, it will need to be discussed by all relevant members of staff and the case for the proposed rating will involve the citing of evidence, which can be based on a number of different kinds of indicators. The evidence can be how the learner was observed to behave inside the centre in various situations or in contexts outside of the centre or it can be what the learner has said about themselves or how they contributed in a conversation with others. Evidence can also include reports by others (e.g. parents, peers, employers) about the young
person. The evidence being cited will need to be explored and clarified in discussion before the rating is determined. If there is disagreement among the staff the rating may need to be negotiated and a compromise reached.

The 10-point rating scale is not envisaged as an equal-interval measure. The distance between the lower numbers is greater than between the higher numbers. For example the move from 1 to 2 is considerably greater than from 8 to 9. This is because soft skills build cumulatively – the more skilful a young person is the more easily they can acquire new ones. The biggest challenge for a centre is often to begin the process of soft skills development, moving a learner from their initial low levels of self-regulation, social interaction and practical capability. This way of conceptualising the ten-point scale is illustrated by the following figure:
Having agreed a set of ratings for the individual learner the staff team then discuss the priority areas for improvement that they will concentrate on over the coming period. This plan will contain the formal and informal approaches that will be used to improve the learner’s soft skills and will name those who will be responsible for this work. Appendix A lists a number of useful documents, programmes and organisations that can support this work.

The plan will also include a date for a meeting to review the learner’s response to this teaching, at which their skill levels will be rated again and their progress measured.

**Recording Progress**

Each learner’s templates will be stored in their individual file, which will show their ratings over time along with the interventions that were planned and implemented. Much of this information will be in qualitative form, providing staff with a detailed and specific descriptive account of the progress being made. These ratings over time provide a quantitative summary of each individual’s progress.

A simple tabulation of all the learners’ ratings over the course of the year provides an easy centre-wide annual summary of the work done by staff in the promotion of soft skills.

**Rate of progress in relation to each individual stage**

A person at stage

1 moving up to stage 2 - 100% Improvement
2 moving up to stage 3 - 50% Improvement
3 moving up to stage 4 - 33% Improvement
4 moving up to stage 5 - 25% Improvement
5 moving up to stage 6 - 20% Improvement
6 moving up to stage 7 - 17% Improvement
7 moving up to stage 8 - 14% Improvement
8 moving up to stage 9 - 12% Improvement
9 moving up to stage 10 - 11% Improvement

Appendix B  OECD and EU Projects on Competences, Skills, Key Competencies and Learning to Learn

Definitions of Competence (or competency)
“the general capability based on knowledge, experience, values, dispositions which a person has developed through engagement with educational practices” The Council of Europe (1997)

‘as the ability to successfully meet complex demands in a particular context through the mobilisation of psychosocial prerequisites (including cognitive and non-cognitive aspects)’ and ‘internal mental structures in the sense of abilities, dispositions or resources embedded in the individual’ which function in interaction with a ‘specific real world task or demand’ and involve the dimensions of ‘Knowledge, Cognitive skills, Practical skills, Attitudes, Emotions, Values and Ethics, and Motivation’. Rychen and Salganik (2003).

The “great benefit to a concept like “competence” is that it directs our attention beneath the observable behavioral surface of “skills” to inquire into the mental capacity that creates the behaviour. And it directs our attention beyond the acquisition of ‘knowledge’ as storable contents (what we know) to inquire into processes by which we create knowledge (how we know.”. Kegan (2002).

Distinction between Competences and Skills
In policy texts, as well as in many other contexts, the words skills and competences are used interchangeably. In education research these words are defined differently:
“Competence means the ability to apply knowledge, know-how and skills in a stable/recurring or changing situation. Two elements are crucial: applying what one knows and can do to a specific task or problem, and being able to transfer this ability between different situations” (Chisholm, 2005). A skill, however, is normally defined as an ability, usually learned and acquired through training, to perform actions which achieve a desired outcome.

“Let us emphasise that the terms competence and skill were not used as synonyms. Skill was used to designate an ability to perform complex motor and/or cognitive acts with ease and precision and an adaptability to changing conditions, while the term competence designated a complex action system encompassing cognitive skills, attitudes and other non-cognitive components. In this sense, the term competence represented a holistic concept.” (Rychen, 2004 p. 21 – 22).

“From a strictly conceptual viewpoint, competence has a broader meaning than skill and many analysts consider a competence to include several skills. If we accept that
distinction, then the concept of competence should be considered as broader, more
general and a higher level of cognition and complexity than the concept skill.” (Tiana,
2004)

Key Competences
In an OECD report the philosophers Canto-Sperber and Dupuy refer to key competencies
as competencies indispensable for the good life (OECD, 2001). In the same report the
anthropologist Goody writes that “the major competencies must be how best to spend
one’s work and leisure-time within the framework of the society in which one lives’
(OECD, 2001).

A key competence refers to ‘second-order learning’ (Dearden, 1976, p. 70) thus not
content or context based but a transdisciplinary competence.

The DeSeCo project proposes three general criteria: 1) key competencies “contribute to
highly valued outcomes at the individual and societal levels in terms of an overall
successful life and a well-functioning society”, 2) key competencies “are instruments for
meeting important, complex demands and challenges in a wide spectrum of contexts”, 3)
key competencies “are important for all individuals” (Rychen, 2003). Rychen also
provides a short definition of the concept key competence: “Key competence is used to
designate competencies that enable individuals to participate effectively in multiple
contexts or social fields and that contribute to an overall successful life for individuals and
to a well-functioning society (i.e. lead to important and valued individual and social
outcomes)” (Rychen, 2004).

The Eurydice report on key competencies suggests two criteria to decide about key
competencies: “The first criterion for selection is that key competencies must be
potentially beneficial to all members of society. They must be relevant to the whole of the
population, irrespective of gender, class, race, culture, family background or mother
tongue. Secondly, they must comply with the ethical, economic and cultural values and
conventions of the society concerned” Eurydice also notes that the: “main conclusion to
be drawn from the large number of contributions to this search for a definition is that
there is no universal definition of the notion of ‘key competence’. Despite their differing
conceptualisation and interpretation of the term in question, the majority of experts seem
to agree that for a competence to deserve attributes such as ‘key’, ‘core’, ‘essential’ or
‘basic’, it must be necessary and beneficial to any individual and to society as a whole. It
must enable an individual to successfully integrate into a number of social networks while
remaining independent and personally effective in familiar as well as new and
unpredictable settings. Finally, since all settings are subject to change, a key competence
must enable people to constantly update their knowledge and skills in order to keep
abreast of fresh developments” (Eurydice, 2002).
Key competences can therefore be seen as the competences required for individual wellbeing in that society. There are three major factors that have been highlighted: first, the *knowledge economy* – a competences that enables you to get a job; second, *lifelong learning* – the ability to continue to update your skills in a rapidly changing job market; and third, *social cohesion* – that people have the social skills necessary for society to function in a democratic manner and in a culturally diverse environment.

**The DeSeCo Competencies**

The identification of a number of key competencies for personal and social wellbeing was a project of the OECD. Known as the DeSeCo Competencies Project, it involved a review of relevant research, consultation with a range of expert and stakeholder groups and international symposia before issuing a report in 2003.
Sequence of DeSeCo Project’s Activities

Review of competence-related research

Clarification of concepts of competence

Opinions of experts and stakeholders

First international symposium establishes network to develop thinking on key competencies

Contribution of country perspectives

Consolidation of expert analysis

Second international symposium builds a consensus

Final report in 2003:
Rychen and Salganik (eds.)
Key Competencies for a Successful Life and a Well-Functioning Society
Gottingen: Hogrefe & Huber

---

2 E.g. sociologists, assessment specialists, philosophers, anthropologists, psychologists, economists, historians, statisticians, educators, policy makers, policy analysts, trade unions, employers, national and international institutions

3 Reports from Austria, Belgium, Denmark, Finland, France, Germany, the Netherlands, New Zealand, Norway, Sweden, Switzerland, United States
The DeSeCo Competencies can be divided into three broad categories:

<table>
<thead>
<tr>
<th>1: Using tools interactively</th>
<th>A. Use language, symbols and texts interactively</th>
<th>Requires the effective use of: ● spoken and written language skills, ● computation and other mathematical skills, in multiple situations.</th>
</tr>
</thead>
<tbody>
<tr>
<td>B. Use knowledge and information interactively</td>
<td>Requires individuals to: ● Recognise and determine what is not known; ● Identify, locate and access appropriate information sources (including assembling knowledge and information in cyberspace); ● Evaluate the quality, appropriateness and value of that information, as well as its sources; and ● Organise knowledge and information.</td>
<td></td>
</tr>
<tr>
<td>C. Use technology interactively</td>
<td>Requires an awareness of new ways in which individuals can use technologies in their daily lives, and go beyond the basic technical skills needed to simply use the internet, send e-mails and so on.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>2: Interacting in heterogeneous groups</th>
<th>A. Relate well to others</th>
<th>Requires: ● Empathy – taking the role of the other person and imagining the situation from his or her perspective. This leads to self-reflection, when, upon considering a wide range of opinions and beliefs, individuals recognize that what they take for granted in a situation is not necessarily shared by others. ● Effective management of emotions – being self-aware and able to interpret effectively one’s own underlying emotional and motivational states and those of others.</th>
</tr>
</thead>
<tbody>
<tr>
<td>B. Co-operate, work in teams</td>
<td>Specific components of this competency include: ● The ability to present ideas and listen to those of others; ● An understanding of the dynamics of debate and following an agenda; ● The ability to construct tactical or sustainable alliances; ● The ability to negotiate; and ● The capacity to make decisions that allow for different shades of opinion.</td>
<td></td>
</tr>
<tr>
<td>C. Manage and resolve conflicts</td>
<td>For individuals to take an active part in conflict management and resolution, they need to be able to: ● Analyse the issues and interests at stake (e.g. power, recognition of merit, division of work, equity), the origins of the conflict and the reasoning of all sides, recognising that there are different possible positions; ● Identify areas of agreement and disagreement; ● Reframe the problem; and ● Prioritise needs and goals, deciding what they are willing to give up and under what circumstances.</td>
<td></td>
</tr>
</tbody>
</table>
### 3: Acting autonomously

| A. Act within the big picture | This competency requires individuals, for instance, to:  
|                              | ● Understand patterns;  
|                              | ● Have an idea of the system in which they exist (i.e. understand its structures, culture, practices, and formal and informal rules and expectations and the roles they play within it, including understanding laws and regulations, but also unwritten social norms, moral codes, manners and protocol. It complements an understanding of rights with knowledge of the constraints on actions;  
|                              | ● Identify the direct and indirect consequences of their actions; and  
|                              | ● Choose between different courses of action by reflecting on their potential consequences in relation to individual and shared norms and goals. |
| B. Form and conduct life plans and personal projects | This competency applies the concept of project management to individuals. It requires individuals to interpret life as an organised narrative and to give it meaning and purpose in a changing environment, where life is often fragmented. This competency assumes an orientation toward the future, implying both optimism and potential, but also a firm grounding within the realm of the feasible. Individuals must be able, for instance, to:  
|                              | ● Define a project and set a goal;  
|                              | ● Identify and evaluate both the resources to which they have access and the resources they needs (e.g. time and money);  
|                              | ● Prioritise and refine goals;  
|                              | ● Balance the resources needed to meet multiple goals;  
|                              | ● Learn from past actions, projecting future outcomes; and  
|                              | ● Monitor progress, making necessary adjustments as a project unfolds. |
| C. Defend and assert rights, interests, limits and needs | On the one hand, this competency relates to self-oriented rights and needs; on the other hand, it also relates to the rights and needs of the individual as a member of the collective (e.g. actively participating in democratic institutions and in local and national political processes). The competency implies the ability, for instance, to:  
|                              | ● Understand one’s own interests (e.g. in an election);  
|                              | ● Know written rules and principles on which to base a case;  
|                              | ● Construct arguments in order to have needs and rights recognised; and  
|                              | ● Suggest arrangements or alternative solutions. |
Based on the work of the DeSeCo project Tiana (2004) makes a tentative proposal for key competencies for education systems. He divides his proposal into two parts; curriculum- bounded competencies and cross-curricular competencies (see table 1):

<table>
<thead>
<tr>
<th>Curriculum- bounded competencies</th>
<th>Cross-curricular competencies</th>
</tr>
</thead>
</table>
| Ability to communicate with others, both orally and in writing:  
  - oral and written mastery of the mother tongue  
  - reading comprehension  
  - mastery of at least one foreign language | Metacognitive competencies  
  - problem solving  
  - developing learning strategies  
  - critical judgement  
  - divergent thinking |
| Basic mathematics skills and numeracy | Intrapersonal competencies  
  - management of motivation and emotions  
  - self-concept  
  - developing personal autonomy |
| Computer literacy and media competence | Interpersonal competencies  
  - capacity of joining and functioning democratically in groups  
  - ability to relate well to other people  
  - ability to play by the rules and to manage and resolve conflicts |
| Capacity of situating in the world of the individual  
  - knowledge of the natural and social world  
  - development of civic attitudes | Positional competencies  
  - ability to cope with complexity  
  - dealing with diversity and change |

### Erikson's Stages of Psychosocial Development

<table>
<thead>
<tr>
<th>Stage</th>
<th>Basic Conflict</th>
<th>Important Events</th>
<th>Outcome</th>
</tr>
</thead>
<tbody>
<tr>
<td>Infancy (birth to 18 months)</td>
<td>Trust vs. Mistrust</td>
<td>Feeding</td>
<td>Children develop a sense of trust when caregivers provide reliability, care, and affection. A lack of this will lead to mistrust.</td>
</tr>
<tr>
<td>Early Childhood (2 to 3 years)</td>
<td>Autonomy vs. Shame and Doubt</td>
<td>Toilet Training</td>
<td>Children need to develop a sense of personal control over physical skills and a sense of independence. Success leads to feelings of autonomy, failure results in feelings of shame and doubt.</td>
</tr>
<tr>
<td>Preschool (3 to 5 years)</td>
<td>Initiative vs. Guilt</td>
<td>Exploration</td>
<td>Children need to begin asserting control and power over the environment. Success in this stage leads to a sense of purpose. Children who try to exert too much power experience disapproval, resulting in a sense of guilt.</td>
</tr>
<tr>
<td>School Age (6 to 11 years)</td>
<td>Industry vs. Inferiority</td>
<td>School</td>
<td>Children need to cope with new social and academic demands. Success leads to a sense of competence, while failure results in feelings of inferiority.</td>
</tr>
<tr>
<td>Adolescence (12 to 18 years)</td>
<td>Identity vs. Role Confusion</td>
<td>Social Relationships</td>
<td>Teens need to develop a sense of self and personal identity. Success leads to an ability to stay true to yourself, while failure leads to role confusion and a weak sense of self.</td>
</tr>
<tr>
<td>Young Adulthood (19 to 40 years)</td>
<td>Intimacy vs. Isolation</td>
<td>Relationships</td>
<td>Young adults need to form intimate, loving relationships with other people. Success leads to strong relationships, while failure results in loneliness and isolation.</td>
</tr>
<tr>
<td>Middle Adulthood (40 to 65 years)</td>
<td>Generativity vs. Stagnation</td>
<td>Work and Parenthood</td>
<td>Adults need to create or nurture things that will outlast them, often by having children or creating a positive change that benefits other people. Success leads to feelings of usefulness and accomplishment, while failure results in shallow involvement in the world.</td>
</tr>
<tr>
<td>Maturity (65 to death)</td>
<td>Ego Integrity vs. Despair</td>
<td>Reflection on Life</td>
<td>Older adults need to look back on life and feel a sense of fulfillment. Success at this stage leads to feelings of wisdom, while failure results in regret, bitterness, and despair.</td>
</tr>
</tbody>
</table>
### NCCA key skill categories and elements

<table>
<thead>
<tr>
<th>Key Skill</th>
<th>Elements</th>
</tr>
</thead>
</table>
| **Information processing** | - Accessing information from a range of sources  
- Selecting and discriminating between sources based on their reliability and suitability for purpose  
- Recording, organising, summarising and integrating information  
- Presenting information using a range of information and communication technologies |
| **Critical and creative thinking** | - Examining patterns and relationships, classifying and ordering information  
- Analysing and making good arguments, challenging assumptions  
- Hypothesising and making predictions, examining evidence and reaching conclusions  
- Identifying and analysing problems and decisions, exploring options and alternatives, solving problems and evaluating outcomes  
- Thinking imaginatively, actively seeking out new points of view, problems and/or solutions, being innovative and taking risks |
| **Communicating** | - Analysing and interpreting texts and other forms of communication  
- Expressing opinions, speculating, discussing, reasoning and engaging in debate and argument  
- Engaging in dialogue, listening attentively and eliciting opinions, views and emotions  
- Composing and performing in a variety of ways  
- Presenting using a variety of media |
| **Working with others** | - Working with others in a variety of contexts with different goals and purposes  
- Identifying, evaluating and achieving collective goals  
- Identifying responsibilities in a group and establishing practices associated with different roles in a group (e.g., |
| Leader, team member | - Developing good relationships with others and a sense of well-being in a group  
- Acknowledging individual differences, negotiating and resolving conflicts  
- Checking progress, reviewing the work of the group and personally reflecting on one’s own contribution |
|---------------------|--------------------------------------------------------------------------------|
| Being personally effective | - Being able to appraise oneself, evaluate one’s own performance, receive and respond to feedback  
- Identifying, evaluating and achieving personal goals, including developing and evaluating actions plans  
- Developing personal qualities that help in new and difficult situations, such as taking initiatives, being flexible and being able to persevere when difficulties arise  
- Becoming confident and being able to assert oneself as a person |
### People Skills

The term people skills is used to include both psychological and social skills. People skills are often described as: (a) understanding ourselves and others and moderating our responses, (b) talking effectively and empathizing accurately, (c) building relationships of trust, respect and productive interactions, (d) the ability to communicate effectively with people in a friendly way, especially in business, (e) a positive sense of well-being and good emotional intelligence.

- Communications
- Being personally effective
- Working effectively with others
- Well being

### Fundamental Skills

Fundamental skills are prerequisites to developing competency in other areas. They provide the framework and a solid basis for personal development. It is very difficult to obtain proficiency in other areas unless the prerequisite fundamental skills are present.

- IT
- Mathematics/Numeracy
- Language/Literacy
- Health and safety

### Conceptual Skills

Conceptual thinking is the ability to understand a situation or problem by identifying and addressing key underlying issues and constraints. Conceptual thinking includes organising the parts of an issue or situation in a systematic way AND being able to conceive thoughts and ideas - to generalise abstract ideas from specific instances.

- Problem Solving
- Managing information/information processing
- Critical and creative thinking
- Enterprise
Appendix E   SNIP Behaviour and Emotion Skill Categories
(snip-newsletter.co.uk/downloads.php)

Learning behaviours

1) Is attentive and has an interest in school
Gives appropriate attention to the teacher
Starts on tasks without undue delay
Maintains task despite attempts at distraction by peers
Can work without high levels of adult intervention
Shows motivation to complete tasks
Completes out of lessons assignments e.g. homework
Listens to and acts on verbal instructions
Can work without distracting other pupils
Shows pleasure in achieving good marks
Is prepared to continue when work becomes difficult

2) Has good learning organisation
Can manage individual learning situations
Shows pride in producing well-presented work
Works at a reasonable pace
Has the necessary equipment for the lesson
Asks permission to use items belonging to others
Achieves deadlines
Does not misplace books

3) Is an effective communicator
Communicates clearly and contributes to discussions
Addresses staff and pupils appropriately
Able to alter voice, pitch and tone appropriately
Uses non-verbal signals e.g. eye contact
Uses speech conventions – turn taking in conversation

4) Works effectively in a group
Co-operates in a group situation
Works collaboratively with others
Listens to and considers others’ points of view
Is able to accept a variety of roles in a group
Can accept disappointment if not selected for a task
Can sustain work when unsupervised by an adult

5) Seeks help when necessary
Seeks attention from adults appropriately
Uses unstructured time appropriately
Does not become disruptive if help not available
Can wait for adult response without impatience or irritation
Conduct behaviours

1) Behaves respectfully towards staff
Is co-operative and responds positively towards staff
Listens and responds to verbal instructions
Is polite/restrained with teaching staff
Is polite/restrained with non-teaching staff
Adds to conversations at appropriate times
Allows other to view their opinions without interruptions
Understands and applies social distinction
Always responds honestly to situations
Can accept responsibility without denial
Apologises without reminder

2) Maintains appropriate relationship with pupils
Treats all other pupils with respect
Is verbally passive and lacks prejudice
Can be trusted not to intimidate other pupils
Can relate to situations from another’s point of view
Can cope with a large group of pupils
Does not seek to externalise blame
Can offer emotional support to others

3) Only interrupts and seeks attention appropriately
Seeks teacher attention appropriately
Settles to tasks without avoidance behaviours
Allows peers to learn without disruption
Is self motivated requiring little adult input to complete tasks
Can wait for attention to be given

4) Is physically peaceable
Controls emotions appropriately when faced with difficulties
Is passive at all times (verbal/physical) towards adults
Avoids conflict with others
Looks for solutions to problems and acts upon them
Controls emotional outbursts
Acts as a peacemaker when disputes arise between pupils

5) Respects Property
Is able to take care of own property
Respects and cares for the property of others
Rejects vandalism and deliberate damage to property

Emotion Behaviours

1) Has Empathy
Indicates tolerance of others’ views
Shows consideration of others’ feelings
Reacts in an appropriate way to resolve situations
Displays emotions appropriate to the situation
Can accept discipline without argument  
Behaves in a socially acceptable way in dining room  
Behaves in a socially acceptable way on outings

2) Is socially aware  
Indicates age-appropriate social interactions  
Interacts appropriately with others of the same age  
Indicates social inhibitions e.g. invasion of personal space  
Interacts with others for the majority of the time  
Actively participates in activities within the class  
Is able to maintain friendships

3) Is happy  
Has a positive outlook  
Is able to participate and have fun with adults and peers  
Has a sense of humour  
Appears happy and content most of the time

4) Is confident  
Is forthcoming in group situations  
Is interested in undertaking new challenges  
Can accept public praise  
Has expectations of achieving success  
Can risk failure

5) Is emotionally stable  
Remains emotionally buoyant without extreme mood swings  
Shows emotional resilience when upset or excited  
Shows self-control and can manage own feelings  
Is able to wait for gratification or recognition  
Can own problems and locate internal solutions

---

Emotional and social competences

1) Self awareness  
*Pupil is able to:*  
Describe emotions they are feeling and why.  
Describe links between their feelings and what they think, say and do.  
Identify how their feelings influence outcomes for them.  
Verbalise their own values and justify them.  
Identify their strengths and weaknesses.  
Describe how their experiences have influenced their views.  
Show insight into their ability to change outcomes.  
Describe realistic and achievable personal goals.  
Present themselves with self assurance.  
Voice opinions that may be different to their peers.  
Make positive choices relating to actions.
2) Self regulation
Pupil is able to:
Manage feelings and react with age appropriate emotions.
Demonstrate behaviour that suggests they are under control
Act responsibly towards others.
Build trust through reliability and consistency.
Admit mistakes and make retribution if required.
Meet personal commitments.
Hold themselves accountable for the completion of tasks.
Organise themselves and their work.
Respond to multiple demands.
Adapt their responses to changing circumstances.
Demonstrate flexibility in their expectations of others.

3) Self motivation
Pupil is able to:
Identify personal targets and work towards meeting them.
Independently locate and put into place, ways to improve outcomes.
Reject short term gains in order to meet longer term goals.
Empathise with the values of others when making choices.
Demonstrate a willingness to try the unfamiliar.
Pursue goals beyond what is required or expected of them.
Empower and enable others to achieve their goals.
Persist in achieving goals despite setbacks and failure.
Approach all tasks with the certainty of eventual success.
See failure as the result of circumstances rather than personal flaws.

4) Social awareness
Pupil is able to:
Demonstrate effective listening skills.
Respond in a way that indicates attention to emotional cues from others.
Show sensitivity and understanding.
Provide support based upon empathy.
Promote situations that allow others to demonstrate skills and abilities.
Celebrate the strengths and accomplishments of others.
Relate well to pupils from all backgrounds.
Demonstrate that differences are not seen as a threat.
Reject the marginalisation of any other pupil.
Demonstrate and bring about compromise.
Seek to establish mutual understanding.

5) Social Skills
Pupil is able to
Bring personal disagreements into the open in a positive manner.
Be assertive without aggression or withdrawal.
Demonstrate skills in reasoned and open discussion.
Maintain and extend supportive peer networks.
Accept with equanimity having desires thwarted or delayed.
Build rapport with peers and adults.
Balance completing tasks with supporting relationships.
Collaborate, share and contribute to joint outcomes.
Appendix F    SEN Initiative Learner Outcomes

Please identify the number of your learners who made significant progress in the following skill areas by acquiring new or increased abilities / skills or by showing increased levels of competence and effectiveness. Only count those who you consider showed a satisfactory level of improvement over the course of the year:

**i. The development of basic skills**

<table>
<thead>
<tr>
<th>Skill Area</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Acquired literacy and numeracy skills</td>
<td></td>
</tr>
<tr>
<td>Acquired information and communication technology skills</td>
<td></td>
</tr>
<tr>
<td>Were effective in the use of oral communication skills</td>
<td></td>
</tr>
<tr>
<td>Were able to apply processing skills when studying</td>
<td></td>
</tr>
</tbody>
</table>

**ii. The development of life skills**

<table>
<thead>
<tr>
<th>Skill Area</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Showed practical knowledge and skills in relation to accessing public facilities and services</td>
<td></td>
</tr>
<tr>
<td>Presented appropriately</td>
<td></td>
</tr>
<tr>
<td>Showed knowledge and understanding of the world outside the locality</td>
<td></td>
</tr>
<tr>
<td>Engaged in the world</td>
<td></td>
</tr>
<tr>
<td>Managed money effectively</td>
<td></td>
</tr>
<tr>
<td>Were at ease eating in public</td>
<td></td>
</tr>
<tr>
<td>Were able to play and have fun with others</td>
<td></td>
</tr>
</tbody>
</table>

**iii. The acquisition of formal accreditation in academic and vocational subjects**

<table>
<thead>
<tr>
<th>Skill Area</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Achieved accreditation in formal study areas whether academic or vocational</td>
<td></td>
</tr>
<tr>
<td>Showed motivation to learn and made real progress in understanding and study skills</td>
<td></td>
</tr>
<tr>
<td>Showed academic ambition and an interest in progressing to further education or training after they leave the centre</td>
<td></td>
</tr>
</tbody>
</table>

**iv. The acquisition of vocational skills**

<table>
<thead>
<tr>
<th>Skill Area</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gained practical skills in vocational subjects</td>
<td></td>
</tr>
<tr>
<td>Achieved non-formal or informal accreditation in</td>
<td></td>
</tr>
<tr>
<td>o Practical skills</td>
<td></td>
</tr>
<tr>
<td>o Art / design</td>
<td></td>
</tr>
<tr>
<td>o Performance</td>
<td></td>
</tr>
</tbody>
</table>
o Awards
o Sport
o SPHE
o Other

Gained practical skills in useful but non-formal vocational skill areas

---

v. Development of effectiveness in work and learning settings (e.g. study skills, time management, working with people)  No.

<table>
<thead>
<tr>
<th>Development</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Behaved appropriately in context</td>
<td></td>
</tr>
<tr>
<td>Participated in and engaged with learning experiences</td>
<td></td>
</tr>
<tr>
<td>Successfully completed work experience placement(s)</td>
<td></td>
</tr>
<tr>
<td>Developed a personal career path plan</td>
<td></td>
</tr>
<tr>
<td>Showed a willingness to take responsibility for tasks</td>
<td></td>
</tr>
<tr>
<td>Were able to work on their own initiative</td>
<td></td>
</tr>
<tr>
<td>Were able to work as part of a team</td>
<td></td>
</tr>
<tr>
<td>Were able to cope with complex situations and make reasonable judgements in them</td>
<td></td>
</tr>
</tbody>
</table>

---

vi. Socio-emotional development  No.

<table>
<thead>
<tr>
<th>Socio-emotional Development</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Were able to manage negative feelings and express them appropriately</td>
<td></td>
</tr>
<tr>
<td>Showed self-regulation</td>
<td></td>
</tr>
<tr>
<td>Showed self-awareness</td>
<td></td>
</tr>
<tr>
<td>Showed skill at interacting with others</td>
<td></td>
</tr>
<tr>
<td>Showed understanding and consideration for others</td>
<td></td>
</tr>
<tr>
<td>Were assertive and confident when dealing with conflict and willing to employ problem-solving approaches</td>
<td></td>
</tr>
</tbody>
</table>

---

vii. Resilience and mental health (including confidence and self-esteem)  No.

<table>
<thead>
<tr>
<th>Resilience and mental health (including confidence and self-esteem)</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Showed happiness or contentment</td>
<td></td>
</tr>
<tr>
<td>Showed self-esteem and confidence</td>
<td></td>
</tr>
<tr>
<td>Were able to cope with their circumstances</td>
<td></td>
</tr>
<tr>
<td>Were open to new experiences</td>
<td></td>
</tr>
</tbody>
</table>

---

viii. Ability to acknowledge difficulties and to seek out and benefit from available support services within and outside the centre  No.

<table>
<thead>
<tr>
<th>Ability to acknowledge difficulties and to seek out and benefit from available support services within and outside the centre</th>
<th>No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Were able to acknowledge their difficulties to themselves</td>
<td></td>
</tr>
<tr>
<td>Were aware of available supports inside and outside the centre</td>
<td></td>
</tr>
<tr>
<td>Were willing to accept suitable help when it was offered</td>
<td></td>
</tr>
<tr>
<td>Were pro-active about seeking support when they felt they needed it</td>
<td></td>
</tr>
</tbody>
</table>
